

The Future of Proof

Why Satoshihash is the simplest way to secure your history.

In the past, you needed a lawyer and a paper stamp to prove a document was real. Today, you have Satoshihash. We use the Bitcoin network to create a permanent, unchangeable record of your files that will last forever.

Simple Use Cases for Everyone:

■ The "Pre-Move" Insurance Policy

Take photos of your new apartment before moving in. Anchor them with Satoshihash to have irrefutable proof of the unit's condition, protecting your security deposit from unfair claims.

■ The Digital Songwriter's Vault

Just finished a new track or set of lyrics? Stamp it before you share it on social media. This establishes you as the creator on a specific date, preventing others from claiming your work.

■ Proof of Important Mail

Take a scan of a signed contract or a formal letter. Satoshihash provides a timestamped receipt that proves you had the final version of that document at that exact moment in time.

■ Securing Personal Milestones

Anchor digital copies of your degrees, birth certificates, or marriage licenses. This creates a personal "Archive of Truth" that you can verify anywhere in the world, forever.

How It Works

No tech degree required.

1. Drag, Drop, Fingerprint

Your browser creates a 'digital fingerprint' (a hash) of your file. Your actual file never leaves your computer—your privacy is our #1 priority.

2. Anchoring to the Blockchain

We take that fingerprint and 'bury' it inside a Bitcoin transaction. Since Bitcoin is the most secure network on earth, your proof is now immortal.

3. Your Forever Receipt

You receive an '.ots' file. Keep this small file alongside your document. It's the only proof you'll ever need to show the world that your file is authentic.
